

# Autonomous Enterpris

## Event Agenda wi

| Time          | Session                                                                                    |
|---------------|--------------------------------------------------------------------------------------------|
| 08:30 – 09:45 | Registrations & Welcome Refreshments                                                       |
| 09:45 – 09:50 | Welcome Address by Organizer                                                               |
| 09:50 – 10:00 | Opening Keynote: The Rise of the Autonomous Enterprise in the Age of Agentic AI            |
| 10:00 – 10:15 | Keynote: Agentic AI in Action: From Pilots to Production                                   |
| 10:15 – 10:30 | Leadership Panel: Building the Autonomous Enterprise with AI, Data, Cloud & Automation     |
| 10:30 – 10:50 | Keynote: Is Enterprise Data Ready for Agentic AI?                                          |
|               | Leadership Panel: From Automation to Autonomy: The Next Shift in Enterprise Transformation |
| 11:05 – 11:30 | Leadership Recognition:                                                                    |
| 11:30 – 12:00 | Coffee & Networking Break                                                                  |
| 12:00 – 12:10 | Keynote: Cloud Modernization for AI-Driven and Agentic Enterprises                         |
| 12:10 – 12:20 | Keynote: How Agentic AI Can Improve Decision-Making and Business Operations                |
| 12:20 – 12:35 | Fireside Chat: Data Governance, Security and Trust in the Age of Agentic AI                |

|                                                                      |                                                                                                                             |
|----------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------|
| 12:35 – 12:50                                                        | Technology-Driven Roundtable: Cybersecurity Risks and Governance for Autonomous AI Systems                                  |
| 13:00 – 13:20                                                        | Enterprise Leadership Panel: AI Agents in Enterprise Applications: ERP, CRM, IT Service Management, Low-Code and Automation |
| <b>13:30 – 14:00</b>                                                 |                                                                                                                             |
| 14:00 – 14:10                                                        | Closing Ceremony & Vote of Thanks                                                                                           |
| <b>14:10 – 15:10      Networking Lunch &amp; Close of Conference</b> |                                                                                                                             |
| 10:50 – 11:05                                                        |                                                                                                                             |

# e Conference 2027 – Riyadh

## th Session Descriptions

| Description                                                                                                                                                                                                                                                                                                                                                                                    |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                                                                                                                                                                                                                                                                                                                                                                |
| As organizations accelerate AI adoption, the enterprise transformation journey is shifting from traditional digital initiatives to intelligent, autonomous business models. This session examines how Agentic AI is enabling smarter decision-making, operational efficiency, and value creation while shaping the future of enterprise-wide transformation, resilience, and long-term growth. |
| Many organizations are experimenting with AI, but only a few are successfully moving from pilot projects to production-ready solutions. This session will explore what enterprises need to scale Agentic AI securely, responsibly, and effectively across business functions.                                                                                                                  |
| As enterprises move toward more intelligent and connected operating models, AI, data, cloud, and automation are becoming critical enablers of transformation. This panel will discuss how these technologies work together to help organizations improve efficiency, accelerate decision-making, and build smarter, faster, and more autonomous business                                       |
| Agentic AI depends on reliable, accessible, and well-structured enterprise data. This session will explore whether organizations have the right data foundation, integration, quality, and readiness to support AI agents and intelligent decision-making at scale.                                                                                                                            |
| Enterprises are moving beyond basic automation toward intelligent systems that can support decisions and actions with greater independence. This session will discuss the shift from rule-based workflows to autonomous operations powered by AI and Agentic AI.                                                                                                                               |
| This recognition segment will honor selected senior technology and business leaders who are contributing to enterprise transformation, innovation, and digital growth. The session celebrates leadership excellence in AI, data, cloud, automation, and autonomous enterprise development.                                                                                                     |
|                                                                                                                                                                                                                                                                                                                                                                                                |
| AI-driven enterprises require scalable, flexible, and modern cloud infrastructure. This fireside chat will discuss how cloud modernization, hybrid cloud, and enterprise platforms can support AI workloads, automation, and future-ready digital operations.                                                                                                                                  |
| This session will explore how Agentic AI can support faster decisions, improve operational efficiency, and enhance business performance. It will focus on practical enterprise use cases where AI agents can assist teams, reduce delays, and improve productivity.                                                                                                                            |
| As AI systems become more advanced, organizations must ensure that data is governed, protected, and used responsibly. This session will explore the importance of trust, compliance, data ownership, and governance frameworks in enabling successful Agentic AI adoption.                                                                                                                     |

As AI agents become more involved in enterprise workflows, cybersecurity and governance become critical priorities. This session will discuss how organizations can manage risks, protect systems, control access, and build safe frameworks for autonomous AI adoption.

AI agents are beginning to transform enterprise applications by making systems more intelligent and action-oriented. This panel will explore how AI can improve ERP, CRM, IT service management, low-code platforms, workflow automation, and business operations.
